Enterprise partnerships professional with fintech experience across **institutional GTM**, **scalable referral** and **channel partnerships, and cross-functional** deal execution. Owns the enterprise partnerships charter end-to-end, from **hunting and farming** through **negotiation, onboarding, and account growth**, while managing individual revenue quota alongside team development. Has converted individual relationships into **recurring partnership channels** with **measurable ROI.**

WORK EXPERIENCE

Business Development Executive – Enterprise GTM | CoinDCX

Sep 2025 – Jun 2026 | Bengaluru

- Owned hunting and farming for 8 institutional firms in 11 months within **Enterprise GTM**, a business line processing **$3B+ in trading volume.** Self-sourced 1,100+ institutional firms, multi-threading outreach across 4–5 contacts per account, and generated **110 qualified meetings** that converted into **8 onboarded clients**, including a strategic account trading $2B+ monthly. **(Recognized as Super Satoshi (Dec 2025) for overall contribution to the Enterprise Business unit.)**
- Built a **scalable partnership** program from a single enterprise relationship into a **recurring referral** channel generating **~$60M/month** in incremental trading volume, **via a referred** OTC buyer and a **prop-trading** firm introduction.
- Identified and converted a high-potential ecosystem partnership at IBW Bengaluru, connecting complementary capital with domain expertise; the resulting partner **onboarded within about a week**, the fastest onboarding the team has completed to date, and scaled to around **$100M/month** in trading volume.
- **Represented** CoinDCX at **industry events** and **partner forums**, including Money Expo, Finbridge, IBW, and Fingrad, building relationships that directly **sourced new partnerships**, including re-engaging a stalled opportunity with a **top-tier Indian brokerage** firm after a two-month lapse and converting it into an onboarded client.
- Negotiated and closed a **price-sensitive deal** involving a competitor price-match tied to a signed volume commitment, taking on **pricing authority** normally reserved for VP-level sign-off.
- **Collaborated** with Product, Engineering, API, Compliance, Legal, and Operations to resolve **partner requirements** and **integration** blockers, independently learning the API stack to diagnose issues before they needed escalation.
- **Mentored** and ramped up **two sales interns** on **prospecting, qualification, and outbound campaigns.** While travelling for client meetings, they **independently generated 10–15 qualified** meetings between them in a **single week,** on their own.

Quantitative Analyst – Financial Risk & Reporting Optimization |Freelance

Sep 2024 – Aug 2025 |Chennai (Remote)

- Built **Python/SQL ETL pipelines** integrating broker APIs and data sources, standardizing datasets for reporting and analysis; developed Monte Carlo & sentiment-analysis models that improved capital allocation decisions by approx. **5%**.
- Reduced **compliance reporting errors by 20%** through SQL validation workflows and reduced reporting latency by **30%** through live Power BI dashboards built end-to-end.

SKILLS

- **Partnerships & Channels:** Enterprise Partnerships, Channel Development, Referral Partnerships, Partner Sourcing, Strategic Alliances, Ecosystem Development, Hunting & Farming
- **Revenue & GTM:** Enterprise Sales, Business Development, Revenue Growth, Customer Onboarding, Product Adoption, Retention & Expansion, Commercial Negotiation
- **Technical & Domain:** API Integrations, REST APIs, API Troubleshooting, SQL, Python, Trading Infrastructure, **Fintech**

PROJECTS

Vector - Algorithmic Trading Engine | Python, LSTM, XGBoost, Pandas, NumPy, APIs |(GitHub) (Demo)

• Architected a 13-phase algorithmic trading engine for Binance Perpetual Futures with **9 deterministic risk gates** on every trade; validated through **144 automated tests**, live testnet execution at **<150ms**, and zero reconciliation discrepancies against exchange state.
• Ran controlled backtests across 60 days of market data, finding an 80% reduction in trade frequency cut transaction costs 79%, while diagnosing signal-timing flaws that limited profitability.

EDUCATION

Bachelor of Technology in Computer Science and Engineering,
SRM Institute of Science and Technology, Kattankulathur | 2021–2025
